                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                      Sequence 9, Application US/09184418C

Patent No. 6492110

GENERAL INFORMATION:

APPLICANT: Hahm, Beatrice

APPLICANT: Shaw, George

APPLICANT: Shaw, George

TITLE OF INVENTION: IMMUNODEFICIENCY VIRUS TYPE 1

FILE REFERENCE: D6287

CURRENT APPLICATION NUMBER: US/09/184,418C

CURRENT FILING DATE: 1999-11-02

NUMBER OF SEQ ID NOS: 112
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1512

This sequence is the direct result of the Base calling software
This sequence is the direct result of the Base calls, To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [128 636].

Submitted (S2-ARF-2002) Maize Mapping Project, University of
Missouri, Columbia, MO 65211, USA

If you are interested in getting corresponding physical clones,
these are publicly available from ZmDB and may be found by BLAST
searching at MSL, maizemap.org; ZmDB, www.rmdb.iastate.edu; TIGR,
www.tigr.org; or NCBI, www.ncbi.nlm.nlh.gov. When the source of the
maize oDNA sequences is either Virginia Walbot, Stanford or Pat
Schnable, lowa State, then clones may be requested from ZmDB:

Direct Submission
Submitted (25-APR-2002) Maize Mapping Project, University of
Missouri, Columbia, MO 65211, USA
If you are interested in getting corresponding physical clones,
If you are interested in getting corresponding physical clones,
these are publicity available from ZmDB and may be found by BLAST
searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR,
www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the maize control sequences is either Virginia Walbot, Stanford or Pat
Schnable, Iowa State, then clones may be requested from ZmDB:
www.zmdb.iastate.edu.
   /note="this sequence is part of a project of EST assemblies resulting from the application of public contigs to seed DuFont contigs; this resource was assembled by DuFont contigs; this resource was overgo addressing of BACs in conjunction with the Maize Mapping Project"

GSS.
This sequence is the direct result of the Base calling software Phred (default parameters). It is the raw base calls. To aid in the identification of the high quality insert the software Lucy (default parameters) has been run on this sequence. Lucy identified the region [123,668].

Plate: Talt539 vow: N column: 07.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

The present invention describes expression cassettes comprising a polymucleotide sequence encoding a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV Type C proteins. The polymucleotides are particularly useful in gene New polynucleotides encoding antigenic HIV Type C polypeptides, useful in applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy. Human immunodeficiency virus type C; antigenic HIV type C protein; immunogenic; immunisation; gag; pol; vif; vpr; tat; rev; vpu; env; nef; immunostimulant; gene therapy; gene; ds. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humaral or cellular immunogenic compositions or vaccines for generating humaral or cellular antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide 99 9 CAGTACGACCAGATCCTGATCGAGATCTGCGGGGAAGAAGGCCATCGGCACCGTGCTGATC CCCAAGGTGAAGCAGTGGCCCCTGACCGAGGAGAAGATCAAGGCCCTGACCGCCATCTGC GCCACCATGGCCGAGGCCATGAGCCAGGCCACCAACATCCTGATGCAGCGCAGC Gechechardeceargeceargadechedechedeceachachrecreargechede AACTTCAAGGGCCCCAAGCGCATCATCAAGTGCTTCAACTGCGGCAAGGAGGGCCACATC AACTTCAAGGGCCCCAAGCGCATCATCAAGTGCTTCAACTGCGGCAAGGAGGGGCCACATC GCCCGCAACTGCCGCGCCCCCCGCAAGAAGGCCTGCTGGAAGTGCGGCAAGGAGGCCCAC CAGATGAAGGACTGCACCGAGGCCAACTTCTTCCGCGAGGACCTGGCCTTCCCC CAGATGAAGGACTGCACCGAGCGCAACTACTTCTTCCGCGAGGACCTGGCCTTCCCC CAGGGCAAGGCCCGCGAGTTCCCCAGCGAGCAGAACCGCGCCAACAGCCCCACCAGCCGC CAGGGCAAGGCCCGCGAAGTTCCCCAGGGAAGCGGGGGGCGCAACAGCCCCACCAGCGC GAGCTGCAGGGGGGGGGGACAACCCCCGCAGGGGCGGCGCCCCGAGGGCGCCAAGGGCACC GAGCTGCAGGTGCGCGACACAACCCCCGCAGCGAGGCCGGCGCCGAGGCGCAGGGCACC CTGAACTICCCCCAGAICACCCTGIGGCAGCCCCCCTGGIGAGCAICAAGGIGGGCGC CAGATCAAGGAGGCCCTGCTGGACACCGGCGCCGACGACACCGTGCTGGAGGAGATGAGC CTGCCCGGCAAGTGGAAGCCCAAGATGATCGGCGCCATCGGCGCCTTCATCAAGGTGCGC crecceecaacresaaecccaaearearceececarceececrrecarcarcaaeerecec CAGTACGACCAGATCTGATCTGCGGCAAGAAGGCCATCGGCACCGTGCTGATC GGCCCCACCCCCGTGAACATCATCGCCCGCAACATGCTGACCCCAGCTGGGCTGCACCCTG AACTTCCCCATCAGCCCCCATCGAGACCGTGCCGTGAAGCTGAAGCCCGGCCATGGACGGC Gaps ö Length 2457; Sequence 2457 BP; 568 A; 830 C; 758 G; 301 T; 0 U; 0 Other; Indels 99.5%; Score 2457; DB 7; L 100.0%; Pred.   The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Env, INT, NGF, pISRnaseH, POI, Tat, Prot, or Rev Polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscularly, intranscentally, intranscentally, intraveginally, intraveginally, intraveginally, intraveginally, cranscermally, transcermally, intraveginally, intraveginally, per intraventing packaging call lines and producing HIV polymetides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

The present invention describes expression cassettes comprising a polypacicle order as a polypeptide comprising immunosemic HIV type C polypeptides reached as polypeptide comprision of the HIV type C polypeptides encoding Gag, Pol. Vif. Vpr. Tat. Rev. Vpu. Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV type C proteins. The polymucleotides are particularly useful in gene therapy and DNA immunisation applications. ABL39942 to ABL40054 and ABB06204 to ABB06215 represent sequences used in the exemplification of the present invention
      New polynucleotides encoding antigenic HIV Type C polypeptides, useful applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy.

   The invention describes a synthetic polymucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polymorleotide is useful for polypeptides. The polymorleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polymucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
  New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, especially humans.

```
The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HIV Gag, Int, Nef, p15RnaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramucoularly, intramucosally, intransally, subcutaneously, intradermally, transdermally, intravaginally, intravectally, orally or intravenusly. The expression cassette is useful for immunisation, generating packaging cell lines and producing HIV polymeptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

  The present invention describes expression cassettes comprising a polynucleotide sequence encoding a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (1). (1) have immunostimulant activity and can be used in gene therapy. The HIV type C polynucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV Type C proteins. The polynucleotides are particularly useful in gene therapy and DNA immunisation applications. ABL39942 to ABL40054 and ABB06224 to ABBC6215 represent sequences used in the exemplification of

The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are decived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV. The gene delivery vector comprising the antibodies against HIV. The gene delivery vector comprising the antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a
  New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, especially humans.

  The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polymeptide including an HIV Gag. Int, Nef. piSnasseH, Pol. Tat, Prot, or Rev polymeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscularly, intramuscularly, intraveginally, subscituanelly, intraveginally, intraveginally, intraveginally, intraveginally, orally or intravenually. The expression cassette is useful polymeptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

   The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HTV Gag, Env, Int, Nef, plSmaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HTV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramusculally, intramuscularly, intramencelly, intravaginally, subcutaneously, intravaginally, transdermally, transdermally, intravaginally, intravectully, orally or intravenously. The expression cassette is useful for immunisation, generating packaging cell lines and producing HTV polypeptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

  The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immunogenic compositions or vaccines for generating humoral or cellular antibodies against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
   New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, especially humans.
  Immunogenic HIV polypeptide; human immunodeficiency virus; HIV; vaccine; gene therapy; packaging cell line; humoral immune response; cellular immune response; gene delivery vector; DNA immunisation; ds.

  The invention relates to a novel expression cassette comprising a polymorleotide sequence encoding a polypeptide including an HIV Gag, Enr, Nef, p15RnaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is subministered intramuscularly, intramuscally, intranabally, subcutaneously, intradermally, transfermally, intraveginally, intravectully, orally or intravenously. The expression cassette is useful for immunisation, generating packaging cell lines and producing HIV

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

   April 10, 2004, 06:34:42; Search time 4127.92 Seconds (without alignments) 17774.420 Million cell updates/sec
  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

  Faxi. See Sections . usask.ca
This sequence is the direct result of the Base calling software
Phrise sequence is the direct result of the Base calls. To aid in the
Phrise (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [128, 536].

Submitted (16-NOV-2003) Celera Genomics, 45 West Gude Drive, Snckville, MD 20850, USA

Flus sequence was made by sequencing genomic exons and ordering them based on alignment.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

끍

New polynucleotides encoding antigenic HIV Type C polypeptides, useful iapplications including DNA immunization or generation of packaging cell lines, particularly in gene therapy.

Claim 1; Fig 10; 233pp; English.

The present invention describes expression cassettes comprising a polymucleotide sequence encoding a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymucleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV Type C proteins. The polymucleotides are particularly useful in gene

```
immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide

  New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, especially humans.
  2457
  GGCAGCGGCGCCCTAGGATCGATTAAAAGCTTCCCGGGGCCTAGCACCGGTGAATTC 2457
   The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for

| The invention relates to a novel expression cassette comprising a polymoleotide sequence encoding a polymelotide sequence encoding a polymelotide role of polymoleotide sequence encoding a polymelotide role of the polymelotide role of the polymelotide role of the novel consideration cassette can be used to treat HIV type C by gene therapy or consed in the development of a vaccine. The gene delivery vector is administered intramescularly, intramescully, intranesally, cubcutaneously, intradermally, transformally, intraveginally, intraveginally, intraveginally, intraveginally, consults of the inventously. The expression cassette is useful cor immunisation, generating packaging cell lines and producing HIV colling of the invention.  Type C related sequence of the invention.   The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Env Int, Nef, pISRnaseH, Pol, Tat, Parch, or Rev Polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscally, intransally, subcutaneously, intradermally, transdermally, intravaginally, intravectully or intravenously. The expression cassette is usefut for immunisation, generating packaging cell lines and producing HIV polypeptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

New polynuclectides encoding antigenic HIV Type C polypeptides, useful applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy.
      New polymucleotides applications includi
```

English. 9; 233pp; Claim 1; Fig The present invention describes expression cassettes comprising a polypoptide comprising immunogenic HIV type C sequence encoding a polypoptide comprising immunogenic HIV type C sequences encoding day, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (T). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polymuleotides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV type C proteins. The polymuleotides are particularly useful in gene therapy and DNA immunisation applications. Particularly useful in gene therapy and DNA immunisation applications. the present invention

   The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polympetide including an HIV Gag, Ent, Nef, plSmaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administraced intramuscularly, intramucosally, intranasally, subcutaneously, intradermally, transdermally, intraveginally, intraveginally, for intravenously. The expression cassette is useful polymeptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

   The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Enr, NEF, pISRnassH, Pol, Tat, Prot, or Rev Polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramucosally, intranseally, intranseally, intravenually, intravenually, intraversion cassette is useful intrarectally, orally or intravenously. The expression cassette is useful polympotides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

   Synthetic
```

```
The invention describes a synthetic polynucleotide encoding 2 or more derived from different HIV subtypes. The polynucleotide is useful for derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunosenic compositions or vaccines for generating humoral or cellular immunosenic compositions or vaccines for generating humoral or cellular antibodies against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
   New synthetic polynucleotides encoding antigenic HIV type B and/or type (polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject especially humans.
   Sequence 5184 BP; 1139 A; 1852 C; 1610 G; 583 T; 0 U; 0 Other;
  ¥
   Example 1; Fig 79; 262pp; English.

   The invention relates to a novel expression cassette comprising a polynucleotide sequence encoding a polypeptide including an HIV Gag, Int, Nef, piSknaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette cân be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscally, intramuscally, intradermally, intraveginally, intraveginally, intraveginally, intraveginally, consily or intravenually. The expression cassette is useful polymeptides. This polymotheotide sequence represents the DNA of an HIV Type C related sequence of the invention.

The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a human immunodeficiency virus immunogenic peptide
   New synthetic polynucleotides encoding antigenic HIV type B and/or type C polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, especially humans.

   The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HIV Gag, Enr, Nef, pisRnaseH, Pol, Tat, Prot, or Rev polymetide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramucosally, intransally, intranscentily, intranscentily, intravenously, intravenously, intravenously, intravenously, orally or intravenously. The expression cassette is useful for immunisation, generating packaging cell lines and producing HIV polypeptides. This polymetide sequence represents the DNA of an HIV

The present invention describes expression cassettes comprising a polymorlectide sequence encoding a polymorptide comprision immunosement by type C polypeptides of the expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunosetimilant activity and can be used in gene therapy. The HIV type C polymorlectides are useful in applications including DNA immunisation, generation of packaging cell lines, and production of HIV type C proteins. The polymorlectides are particularly useful in gene therapy and DNA immunisation applications. ABB139942 to AB140054 and ABB06204 to ABB06215 represent sequences used in the exemplification of TTCCCCCAGGGCAAGGCCCGCGAGTTCCCCCAGCGAGCAGAACCGCGCCAACAGCCCCACC 300 New polynucleotides encoding antigenic HIV Type C polypeptides, useful applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy. / Gag, Env,
   useful
  The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polymetric including an HIV Gag, Env Int. Nef, pismaseH, Pol, Tat, Prot, or Rev polymeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramucularly, intramacosally, intranesally, subcutaneously, intradermally, transdermally, intravaginally, intravaginally, intravection, generating packaging cell lines and producing HIV polypeptides. This polymucleotide sequence represents the DNA of an HIV Type C related sequence of the invention.

  The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for munusation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This sequence encodes a
  9
   subject,
  Immunogenic HIV polypeptide; human immunodeficiency virus; HIV; vaccine; gene therapy; packaging cell line; humoral immune response; cellular immune response; gene delivery vector; DNA immunisation; ds.
  New synthetic polymucleotides encoding antigenic HIV type B and/or type polypeptides, useful as immunogenic compositions or vaccines for generating humoral or cellular immune responses against HIV in a subject especially humans.
